Tab Explanation and Step-by-Step User Guide

This guide explains each tab in the Product Catalog System, the information shown there, who normally uses it, and the exact steps for common work. It covers the authenticated admin panel and the company-scoped public catalog.

Reference style: module purpose, information displayed, main actions, workflow, and controls. Role notes below describe the access checks currently implemented by the application.

System Flow

End-to-end process: Sign in -> Review Dashboard -> Maintain reference data -> Add suppliers and companies -> Create products -> Link marketing assets -> Build packages -> Publish active products through each company catalog -> Review and export catalog metrics.

Sidebar Structure Overview

This is the practical navigation map for the authenticated left sidebar. Marketing and Product Catalogue sections can be collapsed or expanded, and their state is remembered by the browser.

- Dashboard
- Marketing & Materials: Brochures, Fliers, Roll-ups, Posters, Backdrops, Events, Testimonies
- Product Catalogue: Packages, Products, Suppliers, Companies, Bulk Import
- Settings: Countries, Product Types, Categories, Users
- Sign Out
- Public company catalog: Home / Products, Packages, Product Detail, Package Detail

Sidebar tab	Sub pages/actions	Access note
Dashboard	Date filter, KPIs, catalog health, charts, PDF download.	All authenticated roles.
Marketing & Materials	Five asset categories plus Events and Testimonies; add, edit, link products, upload files.	All authenticated roles; delete is Super Admin only.
Packages	Search, create, edit, order products, specifications, image upload.	All authenticated roles; delete is Super Admin only.
Products	Search/filter, create, edit, activate/deactivate, images, certificate, specifications.	All authenticated roles; delete is Super Admin only.
Suppliers	Add/edit supplier, country, affiliated-company links.	All authenticated roles; delete is Super Admin only.
Companies	Add/edit company branding, shortname and contact details.	All authenticated roles; delete is Super Admin only.
Bulk Import	Import Countries, Product Types, or Categories from a spreadsheet.	All authenticated roles.
Settings	Countries, Product Types, Categories, and Users.	Reference data for all signed-in roles; Users only Admin/Super Admin.
Public Catalog	Company-specific products, packages, details, downloads and media links.	No sign-in; active products only, scoped by company shortname.

Role Access

The routes require a signed-in user for every admin module. Destructive actions and user administration apply additional role checks. Product Specialist and Graphic Designer have broad create/edit access in the current implementation; their names describe operating focus, not a strict route boundary.

Role	Can view	Can change
Super Admin	All admin and public-catalog areas.	Create/edit all records, manage every user, activate/deactivate products, and delete records.
Admin	All admin and public-catalog areas.	Create/edit operational records; manage non-Super-Admin users; cannot use Super-Admin-only delete actions.
Product Specialist	All authenticated operational modules except User Management.	Current routes allow create/edit across catalog, marketing, import, and reference data; no delete or user management.
Graphic Designer	All authenticated operational modules except User Management.	Current routes allow create/edit across catalog, marketing, import, and reference data; no delete or user management.
Public visitor	Company-scoped active products and packages.	No admin changes; browse, search, filter, view media, and open certificates.

1. Dashboard

Purpose: The Dashboard is the catalog health and activity overview. It summarizes core record counts, product completeness, publishing status, marketing activity, and category/supplier distribution.

Information Displayed

- Total Products, Companies, and Suppliers for the selected date range.
- Active and inactive product counts; inactive products do not appear in the public catalog.
- Product completeness indicators, including records with images, certificates, categories, suppliers, types, descriptions, and specifications.
- Testimonials, Events, and Marketing Assets with change percentages against the previous equivalent period.
- Products per Category and Top Suppliers charts.

How To Review Catalog Health

1. Open Dashboard after signing in.
2. Check Active and Inactive Products to confirm the intended public visibility.
3. Review completeness indicators and open Products when images, certificates, categories, or other product data are missing.
4. Use Products per Category to spot over- or under-represented categories.
5. Use Top Suppliers to review the product distribution by supplier.

How To Change The Reporting Period

1. Open the Date range control.
2. Choose a preset or enter a custom start and end date.
3. Click Filter to reload counts, comparisons, and charts.

4. Click Download PDF to export the same period as a dashboard report.

2. Marketing & Materials

Purpose: Marketing & Materials stores files and external media references that support product presentation. The sidebar separates Brochures, Fliers, Roll-ups, Posters, Backdrops, Events, and Testimonies.

Sub-tab	Information	Main actions
Brochures	Name, affiliated company, file, linked products.	Add/edit a company-specific brochure and connect it to products.
Fliers / Roll-ups / Posters / Backdrops	Name, file type, linked products.	Upload an image, PDF, PPTX, or XLSX and link one or more products.
Events	Event name, location, start/end dates, media links, linked products.	Add/edit the event and maintain titled photo/video URLs.
Testimonies	Client, treatment, location, treatment date, links, linked products.	Add/edit a client story and titled review/video URLs.

How To Add A Marketing Material

1. Open the required material category from Marketing & Materials.
2. Click Add and enter the Title/Name.
3. For a brochure, select the Affiliated Company so the public catalog can show the correct company-specific file.
4. Upload the required file. Large files are sent in chunks and assembled by the server.
5. Select the linked products and save.

How To Add An Event Or Testimony

1. Open Events or Testimonies and click Add.
2. Complete the identity, location, and date fields.
3. Add one or more titled media links using full URLs.
4. Select the products that should display the item.
5. Save and verify the linked item from a public product detail page.

Deletion Control

Only Super Admin can delete materials, events, or testimonies. Other authenticated roles can create and edit them. Deleting a stored material can also remove its uploaded file from the server.

3. Packages

Purpose: Packages bundle products into a named solution that can be displayed in the company-specific public catalog.

Information Displayed

- Package image, name, description, and product count.
- Included products in a deliberate display order.
- Package specifications as name/value pairs with their own order.

- Search and edit actions; delete appears only to Super Admin.

How To Create A Package

1. Open Product Catalogue > Packages and click Create Package.
2. Enter the package name and description.
3. Upload the main package image.
4. Choose the included products and arrange their display order.
5. Add specification name/value pairs and order them for display.
6. Save the package, then open a company public catalog that contains at least one included active product to verify visibility.

Public Visibility Logic

A package is returned for a company only when it contains at least one active product supplied by a supplier linked to that company. The package detail page applies the same company and active-product rules.

4. Products

Purpose: Products is the central catalog-maintenance tab. It combines commercial identity, regulatory data, taxonomy, specifications, images, supplier ownership, and publishing status.

Area	Fields/actions
Identity	Product Code (required), Model, Description, MDA Registration Number.
Classification	Supplier, multiple Product Types, multiple Categories including nested categories.
Media & compliance	Multiple product images, one main image, MDA certificate upload.
Specifications	Repeatable specification key/value pairs; spreadsheet-assisted entry is supported by the interface.
Publishing	Active/Inactive toggle; inactive records are hidden from public product and package views.

How To Find Products

1. Open Product Catalogue > Products.
2. Search by product text and use Status to focus on active or inactive records.
3. Use the multi-select filters for Category, Supplier, and Product Type.
4. Clear filters before starting a new search when results appear incomplete.

How To Create A Product

1. Click Add Product and upload one or more product images.
2. Choose the main image that represents the product in lists and public cards.
3. Enter the required Product Code, then complete Model, MDA registration number, Supplier, Types, Categories, and Description.
4. Upload the MDA certificate when available.
5. Add specification name/value pairs and confirm the Active status.
6. Save, then review the product detail page and linked marketing content.

How To Edit Visibility Or Delete

1. Open Edit for the product and change Product Status to active or inactive as required.
2. Use inactive status when a product should be retained internally but hidden from every public company catalog.
3. Only Super Admin can permanently delete a product. Review package and marketing links before deletion.

5. Suppliers

Purpose: Suppliers identifies product sources and controls which affiliated companies can expose those suppliers' products in their public catalogs.

Information Displayed

- Supplier name and associated country.
- Linked affiliated companies.
- Products supplied by the record.
- Add, edit, and Super-Admin-only delete actions.

How To Add Or Edit A Supplier

1. Open Product Catalogue > Suppliers and click Add Supplier or Edit.
2. Enter the supplier name.
3. Select the country from Settings reference data.
4. Select every affiliated company that should be allowed to display the supplier's products.
5. Save and verify that linked active products appear under the expected company shortname.

6. Companies

Purpose: Companies defines each public-catalog tenant, including its URL shortname, branding, registration information, and contact details.

Information Displayed

- Company name and unique shortname used in URLs.
- Logo and branding shown throughout that company's public catalog.
- Registration number, address, email, and contact number.
- Supplier links determine the product population for the company.

How To Add A Company

1. Open Product Catalogue > Companies and click Add Company.
2. Enter the company name and a concise unique shortname.
3. Upload the company logo and complete registration/contact information.
4. Save the company.
5. Link suppliers to the new company from Suppliers, then test /<shortname>/home.

Shortname Control

The shortname is part of every public route. Changing it changes the catalog URL. Confirm any published links before editing a live shortname.

7. Bulk Import

Purpose: Bulk Import loads reference lists in batches from Excel or CSV files. It supports Countries, Product Types, and Categories.

How To Import Reference Data

1. Open Product Catalogue > Bulk Import.
2. Choose Countries, Product Types, or Categories.
3. Open the provided template and keep its expected column headings.
4. Select an .xlsx, .xls, or .csv file and review the staged filename.
5. Click Start Import.
6. Review the import results for inserted, skipped, or failed rows before leaving the page.

Import Controls

- Use the template for predictable column mapping.
- Import categories in a structure that preserves main/sub-category relationships.
- Verify imported values in Settings before creating products that depend on them.

8. Settings

Purpose: Settings maintains reusable reference data for suppliers and products. Its tabs are Countries, Product Types, Categories, and Users.

Settings tab	Purpose	Important actions
Countries	Country options used by supplier records.	Add or edit for any signed-in role; delete for Super Admin.
Product Types	Reusable type labels assigned to products.	Add or edit for any signed-in role; delete for Super Admin.
Categories	Hierarchical catalog navigation and product classification.	Add/edit a main or sub-category; delete for Super Admin.
Users	Authenticated staff accounts and roles.	Admin/Super Admin only; delete for Super Admin.

How To Maintain Countries Or Product Types

1. Open Settings and select the required tab.
2. Enter a new value and add it, or open Edit for an existing value.
3. Save the change and verify it appears in supplier or product forms.
4. Super Admin may delete a value after checking whether existing records depend on it.

How To Maintain Categories

1. Open Settings > Categories.
2. Enter the Category Name.

3. Leave Main Category empty for a top-level category, or choose a parent for a sub-category.
4. Save and review the relationship tree.
5. Verify the category in the public filter after assigning active products to it.

9. User Management

Purpose: User Management controls who can sign in and which role is stored in the session. The page is available only to Admin and Super Admin.

Information Displayed

- User email and assigned role.
- Add and edit controls for Admin and Super Admin.
- Delete control for Super Admin only.
- Admin cannot view, create, edit, or promote a Super Admin account.

How To Add Or Edit A User

1. Open Settings > Users.
2. Enter the email, a password of at least six characters, and the role.
3. Click Add User.
4. To edit, choose Edit and change the email or role; leave New Password blank to keep the current password.
5. Only Super Admin can assign the Super Admin role.

Deletion Controls

Only Super Admin can delete a user. The signed-in Super Admin cannot delete their own account from the user list.

10. Public Company Catalog

Purpose: The public catalog gives each affiliated company a branded, unauthenticated product and package experience. Every query is scoped by the company shortname and supplier-company links.

Public page	What the visitor can do
Home / Products	Search active products, filter by hierarchical category, and open a product.
Product Detail	Review images, categories, supplier, description, specifications, certificate, marketing materials, events, testimonies, and company brochure.
Packages	Search packages available through the company's active product set.
Package Detail	Review package image, description, specifications, and included active company-eligible products.
Watch Video	Open supported YouTube, Vimeo, event, or testimony media links in an embedded page.

How To Validate A Company Catalog

1. Open /<shortname>/home without signing in.
2. Confirm the company name, logo, and contact branding.
3. Search for a known active product from a supplier linked to the company.

4. Open the product and verify specifications, images, MDA certificate, and marketing links.
5. Open Packages and verify that only eligible active products are included.

Public Scope Controls

- Unknown company shortnames return a not-found page.
- Inactive products are excluded.
- Supplier-company links define company eligibility.
- The company-specific brochure is selected by both product and company.

11. Authentication And Sign Out

Purpose: Authentication protects the admin panel with an email/password login and a database-backed session. Public company catalogs remain accessible without a session.

How To Sign In And Out

1. Open /login or /auth/login.
2. Enter the registered email and password.
3. After successful verification, the system stores the user ID, email, and role in the session and opens Dashboard. When finished, click Sign Out in the sidebar footer to destroy the session.

System Controls And Good Practice

Required Fields And Validation

- Product Code is required; duplicate or incomplete identifiers should be resolved before publishing.
- Material names and uploaded files are required for new marketing materials.
- Company shortnames must remain unique because they control public routes.
- User emails, passwords, and roles are validated before account creation or editing.
- File uploads should use supported image, PDF, office-document, or spreadsheet formats shown by the form.

Recommended Operating Routine

1. Maintain Countries, Product Types, and Categories before adding dependent suppliers or products.
2. Create companies and suppliers, then link them before testing a public catalog.
3. Create products with a main image, supplier, category, type, specifications, and certificate where applicable.
4. Add company-specific brochures and supporting marketing links after the product exists.
5. Build packages only from complete, active products.
6. Review Dashboard completeness and public catalogs before sharing a shortname URL.
7. Prefer deactivation over deletion when a product may be needed for history or later republishing.

Complete Information Flow

Catalog flow: Settings reference data -> Affiliated company -> Supplier and company links -> Product identity, media, compliance, and taxonomy -> Marketing relationships -> Package composition -> Active publishing status -> Company-scoped public catalog -> Dashboard reporting.
